

## **Älmhult airport [Möcklanda, ESMU]**

Version 1.0 for MS Flight Simulator X with SP2/Acceleration. The scenery will work with earlier versions of FSX but there might be problems with seasonal transitions. Does not work in FS2004 (older version for FS2004 is available at [fsnordic.net](http://fsnordic.net)).

The scenery covers Älmhult airport (ESMU) and it's surroundings and is built as a joint effort by Erik Björnwall and Lennart Arvidsson. The airport is situated north of Älmhult in the south part of Sweden and is run by Älmhults Flygklubb (Älmhult Aeroclub).

The scenery is adapted to be used with UTX Europe. Of course the scenery can also be used without this add-on but then roads and shorelines will be less accurate.

## INSTALLATION

To be added to, and activated in, FSX in the usual way. The scenery should preferably be placed in "FSX\Addon Scenery" and should be placed above any scenery containing mesh, land class or roads, rivers and coast lines in southern Sweden, when activated in "Scenery Library".

Älmhult is situated in the middle of a peat milling area which explains the large dark brown areas around the airport. This is such a dominant part of the surroundings that it simply must be modelled complete with it's peat storage shed.

### **ADDITIONAL INFORMATION**

3D-grass on and around the airport are made up from files used with the kind permission of Kobbe Farwick.

The animated windsock is included with the kind permission of it's designer Jörg Dannenberg ( <http://www.flightport.de/> ).

We have tested the scenery at all times of day, seasons and weather situations without finding any serious faults but there are certainly some that we have not noticed. Please feel free to tell us if you find any. Comments and/or questions are welcome via the fora at [flightsim.se](http://flightsim.se) or [fsnordic.net](http://fsnordic.net).

Many thanks to: Kobbe Farwick for grass textures  
Jörg Dannenberg for the windsock

**Korsanäs and Landskrona, February 2009**  
**Erik Björnwall and Lennart Arvidsson**
